

Sharing Technology and Skills Program Registration

Introduction

The CaseWare IDEA Academic Program provides post-secondary institutions free access to IDEA Data Analysis software, tools, and resources to incorporate into their course curriculum. Students enrolled in the course are provided with their own copy of IDEA and teachers can utilize the CaseWare Workbook with sample data to incorporate exercises, real-world scenarios, and quizzes into their analytics course.

IDEA software is a fully functional data analytics tool, with an easy-to-use interface that is ideal for introducing students to the concepts involved in basic data analysis, database theory, financial and audit analytics. It is also a very powerful and sophisticated platform that enables more advanced users to explore topics such as predictive analytics, visualizations, Benford's Law, and advanced analytics using Python.

Eligibility

Participation in the CaseWare IDEA Academic program is open to accredited post-secondary institutions such as Universities and Colleges as well as vocational adult education academies. Participating institutions are expected to incorporate the use of IDEA into their curriculum in courses related to audit, finance and accounting, data analytics, fraud detection or other related subject matter.

Some knowledge of IDEA is strongly recommended. Professors and teaching assistants may use CaseWare IDEA tutorials and online self-learning to become familiar with the software. However, it is recommended that participants obtain formal IDEA training, available from the local IDEA distributor.

Included in Registration

- Unlimited number of **IDEA Educational licenses** for use by professors and students. A fully functional version of IDEA with a 5,000 record restriction, with no expiry date.
Optional versions may be provided to accommodate, Larger datasets, Virtual classroom configurations and simplified setup for temporarily using the IDEA demo version. Contact your Audimation representative to discuss.)
